# Brown Dog Data Tilling Service

Luigi Marini

July, 22<sup>nd</sup>, 2002

National Center for Supercomputing Applications University of Illinois at Urbana–Champaign

### Outline

- DTS?
- Brief background on building blocks
  - Medici
  - Versus
- Sample use cases
  - Census
  - LSVA
  - Great Lakes Monitoring / IML-CZO
- A few more details about DTS
- Adding tools
  - Extractors
  - Metrics

### **Data Tilling Service**

- Till (v): "to prepare and cultivate (land) for crops" (google)
- Data Tilling (v): To prepare and cultivate (data) for analysis
- Tillage (n): "is the agricultural preparation of soil by mechanical agitation of various types, such as digging, stirring, and overturning." (wikipedia)
- Data Tillage (n): Is the *computational* preparation of *data* by *algorithmic* agitation of various types, such as digging, stirring, and overturning

### **Data Tilling Service**

# (Pre) Data Analysis

- Not necessary data cleaning
- More like *metadata extraction*
- Not full analysis / Not perfect results
- Apply as many methods as possible
- Support the user in finding the metadata they need

### **Bookmarklet**

### **Extraction Bus**

2 building blocks **MEDICI & VERSUS** 

### **Medici - Data Management for Research Data**

- Any file type
  - Like a file system or cloud storage
- Upload first, organize later
  - Social curation
  - Tags, collections, datasets, spaces, generic metadata
- Extensible
  - Creating new data extractors
  - Creating new data previewers

### Organize, Search, Analyze

### **Open source**

- Install service on your own resources
- We host instances at NCSA
  - 18 instances for SEAD Datanet
  - 15 other instances
- Brown dog DTS maintained by NCSA
  - All code available can be installed and maintained somewhere else

### Timeline

- v.1 Development started
- v.1 First public release
- v.2 Development started

November 2009June2010November 2012

### **Drivers**

- Cyberinfrastructure that works well across disciplines
  - physical sciences, biology, medicine, humanities, arts, and social sciences
- Large-scale community collections of heterogeneous data and metadata
  - documents, images, video, 3d, sensor, gis, etc.
  - metadata fields based on specific uses cases
- Rapid growth from
  - High throughput instruments
  - Digitization efforts
  - More sources (cameras, phones, tablets)

### **Funding Sources**

- **ONR** Technology Research, Education and Commercialization Center
- NARA/NSF OCI Understanding Data Intensive and CPU Intensive Services to Support Preservation and Reconstruction of Electronic Records
- **NSF CDI –** *Groupscope: Instrumenting Research on Interaction Networks in Complex Social Contexts*
- **NSF DataNet** Sustainable Environments-Actionable Data (SEAD)
- **NSF EAR –** *Critical Zone Observatory Network for Intensively Managed Landscapes (IML-CZO)*
- **NSF/NEH/JISC –** *Digging into Image Data to Answer Authorship Related Questions*
- NIH Immunomodulatory and Regenerative Effects of Mesenchymal Stem Cells on Allografts
- Sea Grant Great Lakes Monitoring
- European Commission Linking Scientific Computing in Europe and the Eastern Mediterranean
- **XSEDE –** Large Scale Video Analytics
- NSF ACI CIF21 DIBBs: Brown Dog

# **Medici - Features**

- Upload / download
- Automated data extraction and analytic services
- Data type previews
- Indexing / Search / browse
- Tag / comment
- Create collections
- Geo-locate data (map view)
- Define a specific taxonomy
- Access statistics, data provenance
- Citable persistent URLs
- Author defines copyright and license attributes
  - View only, prevent download
- Create relationships between datasets

### Versions

- Scale up and out
- Robust API easier to write clients
- User experience improvements

In progress

**Stable** 

### **1.0 - What parts were successful?**

- Decentralized cloud storage
  - Install your own instance and maintain for your community
- Flexible metadata support
  - No predefined schemas/ontologies
- Framework for adding domain specific features
  - Extractors
    - Dig into the files for information
  - Previewers
    - Visualize information on the web
- Support for discovery of new content
  - Text-based search, social annotation

# **2.0 Priorities**

### Scalable

• Both horizontally and vertically

### Maintainable

- Decoupled
- Higher level languages
- Build on proven technologies

### Extensible

- Add extractors and previewers without recompiling
- Full fledged API
- Usable
  - Modernize the user interface

# Version 2.0

- Web scale
  - Across the stack
- Introducing projects
  - Group based access control
- File versioning
  - Keeping generic provenance trail
- Multiple files in a dataset
  - Explicit instead of implicit zip files
- Multimedia search
  - Find similar images, videos, audio
- Recommender system
  - Recommend datasets based on metadata and user activity

# **Improved UI**

### Versus

- Execution and dissemination of customizable contentbased file comparison methods
- Generalized content-based comparison and retrieval of files
- Ability to plugin new methods and reuse existing ones
- Consists of
  - Java API + Engine
  - Library of methods
  - Web Service
  - Variety of web and desktop clients

#### **Content-Based Comparison**

- Goal: Comparing digital data
- Given two or more digital objects establish their proximity
- Arbitrary?
- Not really, comparing two files, videos, documents, etc. has many applications, for example:

### **Some Applications**

- Information loss
  - Information loss when applying file format conversion
  - Polyglot
- Content-based retrieval
  - Given a multimedia file (image) find the closest ones in a large collection
- Find duplicates
  - Across formats

#### **Census Information Retrieval**

#### **History**

- Funding by National Archives and Records Administration (NARA)
- Research and development started in 2010
- Originally focused on pairwise comparison
- Adding support for the creation of indexes over past two years
- Current version is 0.6
  - Usable but still in flux
  - Particular important with APIs
  - Lots of exploratory work over the years

#### **Two Main Components**

#### Core

- A set of Java interfaces
- Multithreaded Execution Engine
- Registry to register and query for methods

#### Web Service

- HTTP API wrapping Core
- Master/slave architecture

#### **Several Clients**

- Command Line Interface
- Web Application
- Desktop App

# Why would one use Versus instead of writing specific implementations as need be?

- **Reuse** existing methods
- Share methods with community
- **Organize** code in clear components
- Leverage execution environment and service infrastructure

#### **Pairwise Comparison API**

#### **Indexing API**

#### **Master/Slave**

#### **Library of Adapters**

Name	Package	Description
Mesh	3D	Load 3D files content into a mesh made up of vertices and polygons connecting those vertices.
Audio	Audio	Encapsulation of audio files.
Bytes	Core	Simplest possible representation of data.
PDF	Doc2Learn	Encapsulation of the Doc2Learn PDF document.
Buffered Image	Image	Standard Java representation of image data.
Image Object	Image	Encapsulation of the Im2Learn Image Object.
SIFT GPU	GPU	Encapsulation of image data for SIFT Gpu specific processing.

#### **Library of Descriptors**

Name	Package	Description
Double Array	Core	A single dimensional array containing double values.
MD5 Digest	Core	A data integrity structure generated from the raw data.
Three Dimensional Double Array	Core	A three-dimensional array containing double values.
Vector	Core	A list of generic elements, allows greater storage flexibility.
Label Histogram	Doc2Learn	A histogram of labels obtained through Doc2Learn.
Keypoint	Image	Generic container for invariant feature detectors.
Pixel	Image	Generic type for various image package descriptors.
Color Layout	Image	A two dimensional grid of sub-images over the input image.
Grayscale Histogram	Image	A one-dimensional grayscale image histogram.
RGB Histogram	Image	A three-dimensional RGB color histogram.
Pixel Histogram	Image	A multidimensional histogram for a pixel's intensity and position.
MOPS Features	Fiji	Invariant feature type used for image stitching.
SIFT Features	Fiji	Popular invariant feature type used for image comparison and object matching.
SIFT Gpu	Gpu	Same as SIFT but implemented through Gpu libraries.
Harris Corners	OpenCV	Well-known corner detector used for image inference, tracking, and recognition.
Hough Circles	OpenCV	Circles detected in an image with the Hough

#### **Library of Extractors**

Name	Package	Description
Light Field	3D	Surface is represented by silhouettes taken from 3 canonical positions capturing the surface shape minus any concavities (i.e. the convex hull).
Statistics	3D	Ignores the surface and focuses on the vertices of a 3D object returning their mean and standard deviation. Simple, but fast to compute.
Surface Area	3D	The sum of the area occupied by the polygons making up a surface. Considers surface and is still fast to compute.
Audio	Audio	Sampling of audio from existing file for histogram usage and comparison.
MD5	Core	Creation of the MD5 hash from data.
Image Histogram	Doc2Learn	Generates a non-standard color histogram
Line Graphics Histogram	Doc2Learn	Generates a histogram to compare vector graphics found in documents.
Text Histogram	Doc2Learn	Generates a label histogram based on word frequency.
Array Feature	Image	Generates the three-dimensional double array; a generic image container.
Color Average Vector Feature	Image	Generates an average RGB color over 9 regions taken from the image.
Grayscale Histogram	Image	Generates the histogram for grayscale images. Useful for image comparison.
Pixel Histogram	Image	Generates the multidimensional histogram for feature matching.
RGB Histogram	Image	Generates the histogram for color images. Useful for image comparison.
Signature Vector	Image	Feature vector (for an image) containing colorspace

#### **Library of Measures**

Name	Package	Description
Chessboard Distance	Core	Also known as Chebyshev; the greatest difference along any coordinate dimension (between two vectors)
Dynamic Time Warping	Core	Similarity metric between two (possibly) varying sequences over time.
Euclidean Distance	Core	Distance between two n-dimensional points in Euclidean space.
Manhattan Distance	Core	Absolute difference of coordinates of points, distance between two points measured along right angled axes.
MD5 Hash	Core	Binary measure; either equal or not.
Bhattacharyya Distance	Image	Measures the overlap between two probability distributions.
Neyman's $\chi^2$	Image	Tests the <i>goodness of fit</i> between two distributions. Variant of the standard $\chi^2$ test.
Czekanowski Distance	Image	Sum of the absolute value of the difference of two distributions divided by the sum of the two distributions.
Histogram Euclidean Distance	Doc2Learn / Image	Bin-by-bin comparison using the standard Euclidean distance. Well known and widely used.
Histogram Intersection	Doc2Learn / Image	Sum of the absolute value of the difference of two distributions, scaled by one-half. Well known and widely used.
KL Divergence	Image	Non-symmetric measure of the difference between two probability distributions. Well known measure of entropy.
Jeffrey Divergence	Image	Symmetric measure of the difference between two probability distributions.
Motyka Distance	Image	Sum of the maximum of two distributions divided by the sum of the two distributions.
Normalized Cross Correlation	Image	Similar to sum of squared differences; invariant to the magnitude of two points.
Ruzicka Similarity	Image	Sum of the minimum of two distributions divided

# CREATING EXTRACTORS AND MEASURES

#### **Creating New Extractors**

- Be able to talk HTTP and parse JSON
- Learn the API
- Use a RabbitMQ client library to connect to broker
- Learn the extraction architecture
  - What messages to listen for and publish
  - How to parse message payload
- Tutorial
  - <u>https://opensource.ncsa.illinois.edu/confluence/display/BD/</u> <u>Medici+Extractor+in+Python</u>

#### **Creating Versus Methods**

- Write Java Code
- Can execute external code using
  - Runtime.getRuntime().exec(args)
  - JNI
- Register them using Java services
  - Add fully qualified class name to respective service file
  - For example add
  - edu.illinois.ncsa.versus.extract.impl.RGBHistogramExtractor
  - To
  - /META-INF/services/edu.illinois.ncsa.versus.extract.Extractor
  - Restart

#### **Creating Versus Methods**

- Adapters
  - <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/</u> versus-core/browse/src/main/java/edu/illinois/ncsa/versus/ adapter/Adapter.java
- Extractors
  - <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/versus-core/browse/src/main/java/edu/illinois/ncsa/versus/extract/Extractor.java</u>
- Descriptors
  - <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/versus-core/browse/src/main/java/edu/illinois/ncsa/versus/descriptor/Descriptor.java</u>

#### **Creating Versus Methods**

#### • Proximities

- <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/</u> versus-core/browse/src/main/java/edu/illinois/ncsa/versus/ measure/Proximity.java
- Indexers
  - <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/versus-core/browse/src/main/java/edu/illinois/ncsa/versus/search/Indexer.java</u>
- Service Registration
  - <u>https://opensource.ncsa.illinois.edu/stash/projects/VS/repos/</u> versus-image/browse/src/main/resources/META-INF/services/ edu.illinois.ncsa.versus.extract.Extractor
