

2019-04-24 Brown Dog Meeting notes

Date

24 Apr 2019

Attendees

- [Yan Zhao](#) - absent
- [Sandeep Puthanveetil Satheesan](#) -
- [Luigi Marini](#) -
- [Shannon Bradley](#) -
- [Mark Fredricksen](#) -
- [Rob Kooper](#) - absent
- [Kenton McHenry](#) - absent
- [Gregory Jansen](#) - absent
- [Dukyun Nam](#)
- [Deren Kudeki](#) - absent

Discussion items

New version of tools catalog is still a focus to release

Time	Item	Who	Notes																								
		Shannon	coordinating Pollen clowder image																								
		Sandeep	<ul style="list-style-type: none">• Developed green index extractor for images and deployed on development instance<ul style="list-style-type: none">• does not have a bamboo plan - does not have permissions to make one? - get with Rob• will then need to go to production• Shared docs with Matt Browning and team. Will schedule a meeting next week.• Met with Matias about dataset question and Box skill in general<ul style="list-style-type: none">• Dataset is curated subset of DES DR1 (https://des.ncsa.illinois.edu/releases/dr1) with images of galaxies with higher brightness levels• It contains about 60,000+ images. The model was trained using about 12,000+ images and currently the Box skill finds similar galaxies from these 12K images.• There is metadata associated with each of the galaxies, which might be useful to a researcher. Would need to use a different card to display (transcript card maybe?)<ul style="list-style-type: none">• Example:<table border="1"><thead><tr><th>ID</th><th>RA</th><th>DEC</th><th>G</th><th>R</th><th>I</th><th>Y</th><th>Z</th></tr></thead><tbody><tr><td>392371906</td><td>59.556006</td><td>-31.279512</td><td>16.57033157</td><td>15.91237926</td><td>15.5947876</td><td>15.27796268</td><td>15.38665581</td></tr><tr><td>35813.4-311646.2</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr></tbody></table>• Paper about dataset: https://arxiv.org/abs/1801.03181• Have not communicated with the student who requested access yet - Nikhar Mamtora<ul style="list-style-type: none">• give him the directory to try it out• only give temporary access	ID	RA	DEC	G	R	I	Y	Z	392371906	59.556006	-31.279512	16.57033157	15.91237926	15.5947876	15.27796268	15.38665581	35813.4-311646.2							
ID	RA	DEC	G	R	I	Y	Z																				
392371906	59.556006	-31.279512	16.57033157	15.91237926	15.5947876	15.27796268	15.38665581																				
35813.4-311646.2																											
		Mark	<p>not much time to work on docker compose file - have found some Rob files released for Pecan which could be reviewed for info -</p> <p>focus on bd fiddle, fence, rest of what he already has</p> <p>persistent volume - yes - mongo, filesystems for polyclot and clowder should be persistent</p> <p>redis snapshots - so will need it</p> <p>Tools catalog next</p> <p>saw test failures a couple hours ago - will look at them</p> <p>dbpedia is down because their end point is down - hoping it will come back up OR may need to change to a different end point - can we catch this and display the endpoint data of "under maintenance"</p>																								
		Deren	no updates																								
		Luigi	<p>good meetings with Pollen team - setting up clowder instance for them to play with</p> <p>we need to discuss when people try things out - should we just point them to a central instance - clowder demo and maintain properly</p>																								
		Rob	worked on <input checked="" type="checkbox"/> BD-2339 - Setup a Clowder Instance called PollenImage <input type="button" value="DONE"/>																								
		Greg	This week I am working on packaging the punch card reader as an extractor. It is just a library and a CLI at the moment.																								

		Dukyun Nam	learning tensor flow and keras checking information on image file - not on pavement files try sidewalk images first GPU nodes - can sign up for nodes / make a request for this project Barbara also has a GPU node as well
