2020-08-07 Clowder Meeting notes

Date

07 Aug 2020

Attendees

- Luigi Marini
- Rob Kooper
- Maxwell Burnette
- Michael Lambert
- Mark Fredricksen
- Bing Zhang
- Shannon Bradley
- Todd Nicholson

Discussion items

Who	Notes
Luigi Marini	- Mikes's PR on extractions job-ids is merged. Need to merge the pyclowder one and rebuild all extractors - Need to test what happens with pyclowder branch merged and current clowder release - Next week there will be a Clowder steering committee meeting - Have not had time work on documentation - Try simple wordcount instead of regular word count
Bing Zhang	- Use logspout and greylog to log all extractors docker - logspout has a lot of interesting features and plugins
Michael Lambert	- What happens with pyclowder branch merged and current clowder release? - Tagging and organizing extractors
Mark Fredricksen	Adding new polyglots converters to browndog catalog
Rob Kooper	- Helper function to check if services are available, to be used in kubernetes as init containers. - Discovered an issue with cilogon and multiple clowder frontends. The oauth flow needs to go through one frontend. Stick login/authenticate in nginx to go to the same machine. - New industry streaming use case of large dataset from lab - How do we manage pyclowder updates? - Move away from using latest in extractors and tag with specific versions - Need to notify community of new versions of pyclowder - We could have clowder require a certain version of pyclowder and notify users when they don't match
Todd Nicholson	- Extra task - updating some of the old 4ceed extractors that did not work with new clowder/pyclowder. Some used python2 code from projects that were never updated. - Mobile app release in progress, resetting key took longer than expected. Closed release for iphone should be ready soon. - Plan for next week - focus on 2.0 release
Sandeep Puthanveetil Satheesan	- Based rokwire contribute guidelines on the clowder one - Using detectsecrets package to check for secrets
