

Boolean Retrieval Baselines

As Indri allows to specify Boolean-style queries using the #band (Boolean AND), #or, and #not operators, we try to transform the Biocaddie "short" queries into Boolean queries using the Indri query language and rerun all the baselines using the Boolean queries.

1. Transform Biocaddie short queries into Boolean style

Using script `boolquery_converter.sh` (https://github.com/nds-org/biocaddie/blob/master/scripts/boolquery_converter.sh)

Output: `boolqueries.combined.short` (<https://github.com/nds-org/biocaddie/blob/master/queries/boolqueries.combined.short>)

2. Run IndriRunQuery on 6 baselines: tdidf, okapi, dir, jm, two and rm3.

Results:

Dir, jm, two and rm3 work fine without errors.

```
