Meeting Notes

10/11/19

ISSUES

- Download links are broken - Fix has been pushed
- Only a few of the counties are shown, CDs 7-9 for Illinois - Fix has been pushed
- Weather forecast data
    - https://www.weather.gov/documentation/services-web-api has somewhat limited data
    - QPF06 - 6 hour precip, sum together 4 of them, enough for 3 days, then set data to zero after that & used 8 days of temperature
        - http://sats.nws.noaa.gov/~mos/mos/wnv/IL_divisions_all.csv
        - Nancy can request the data for other states

NEXT STEPS

Data upload and cleaning module

- People may not have location data in same dataset as the results data - can we upload alternate file to map those things?
- Need to specify a unique identifier or formula
- Can have multiple pools from same trap on same day
- Tutorial/guide/template of what their data should look like
- GPS location can vary for the same traps or have 0s for the location - make sure the trap IDs are unique and what it means to be unique
- Target for December so people can play w uploading before season
- Undo uploading of data?
- Citations of the R code
