2017-10-27 Sprint commit

Status:

- Kevin 25%
- Charles 25%
- Ben 50%
- Mike 25%
- Craig 50%

Sprint 34 retrospective:

- What went well during the sprint cycle?
    - Likes not pre-assigning things
    - Roadmapping helped
- What went wrong during the sprint cycle?
    - Went in with lack of direction and have grab-bag of stories
    - Still have a big review backlog
    - Unclear who to delegate tasks to
    - Allocation – Mike has so little time; Craig was subsumed by TERRA-REF
- What could we do differently to improve?
    - Still finding our velocity – need to prioritize

Sprint 35 Priorities

- SC17 demo
    - Get stitching working via Singularity on Comet
- Website updates for NDS8/SC17
    - Initial list of datasets
    - Workbench marketing (landing page for industry?)
    - Container workshop report announcement
    - Other improvements (minimal efforts)
        - Redo partners page (needs Christine's input)
        - "Real usability" - public affairs input?
- Roadmap priorities (2017-10-19 Roadmap)
    - Workbench to commercial cloud:
        - Need partner/real use case (ESIP/Earthcube, seedme)
    - List of datasets (demonstrating DataDNS)
    - InCommon authentication
        - InCommon authentication (i.e., Globus or CILogon) should be prioritized over LDAP. We should go ahead and work through the design for both, but prioritize accordingly

Moesta data:

- SDSC Cloud/Swift
- Copied data over
- Either needs to be public or only accessible via Swift
