NCSA ldap signup

- change the **Group Description: isda_bd_fence**
- how to use **group required questions.** if the use add no text in the question box, they get "You must answer the **group required questions** to continue" (so it detect the questions based on the question mark?)
- **customize the signup email**. current email has no word about brown dog (both title & context). all about NCSA. and no username (I mean the user may forget their username). maybe can contain the group description
- **customize the signup validation email.** admin approve this user and user get another email, has no word about brown dog (can add some brown dog example in this email)
- **change the link on the final step**. go to the reset-password page (with a new code). after reset the password, there are link on the page, but this link has nothing to do with brown dog, is the link to login LDAP identity.
- move all **old Brown Dog user** to LDAP
- use the new URL for signup, and redirects user to the new URL when they go to browndog.ncsa.illinois.edu/signup.
