2019-12-06 Clowder Meeting notes

Date

06 Dec 2019

Attendees

- Luigi Marini -
- Rob Kooper
- Sara Lambert
- Bing Zhang
- Maxwell Burnette
- Shannon BradleyTodd Nicholson (absent)
- Mark Fredricksen

Goals - Technical Meeting

• Ad Hoc webinars open to anyone with the link (will be on the Clowder main website) - they will be announced as needed Other meetings will be technical meetings for developers to discuss code, planning, etc.

Discussion items

Item	Who	Notes
	Luigi Marini	 Crowdsourcing ideas for generating interest in our monthly Clowder webinar and recorded videos Mark: submitting to Bytes & Pieces might help notify NCSA Max: RSS feed might help to notify people of new discussion topics Max: something pre-recorded might be more easily digestible than only offering real-time webinars First Friday of the month is difficult to nail down regularly (e.g. first Friday of January) Clowder Webinar will be more flexible going forward (still always on Friday) Created a Jekyll version of the Clowder landing page, so site doesn't feel as static Since it's based on a Git repo, this will share the load of maintaining the landing page among all developers
	Todd Nicholson (absent)	 Released a version of the Clowder mobile app for both Android and iOS Currently in alpha, but looking for feedback on user experience and usability
	Maxwell Burnette	 Preliminary planning/work for CSSI which includes the Clowder 2.0 Making some big changes to the code base, so breaking changes may follow Cleaning up some of the deprecated or dead bits of the Clowder code base (e.g. uploading a file outside of a dataset) Erring on the side of getting rid of unused or unsupported functionality This will also include an upgrade to Play framework and other Clowder dependencies This will change how we write/use plugins, so later releases will need to migrate these plugins to the new framework as needed There is a 2.0-work-in-progress branch on Bitbucket for feedback/collaboration Working with Todd on trying to come up usability improvements for Clowder e.g. responsiveness for mobile device support This will be a long process, and any feedback would be greatly appreciated Question: There has been some talk about federating different Clowder instances - what exactly does that mean? Luigi: every project seems to have a different idea of what this feature would look like Luigi: for example, replication vs federation - if replicating, how to keep things in sync? lots of open questions here
	Rob Kooper	 Deployed Clowder + S3 storage configuration for the OSN project Some folks in Arizona are interested in the iRODS storage plugin iRODS plugin code hasn't been used in a long time, and will need to be tested and likely updated
