

Commercial Cloud Access

- [Overview](#)
 - [AWS](#)
 - [Google Cloud](#)

Overview

Depending on project allocations and budgets, we are sometimes offered project-based access to commercial cloud.

We currently have basic patterns in place for accessing both AWS and Google Cloud.

AWS

To log into AWS with your university account:

1. Navigate to <https://aws.illinois.edu/>
2. Click "Log In" at the top
 - You should be redirected to a shibboleth login screen
3. Enter your NETID and password and click "Login"
 - If you have configured 2FA for your university account, then you may be prompted for Duo 2FA

You should then be taken to AWS, where you should be prompted to choose a project

Google Cloud

To log into Google Cloud with your university account:

1. Navigate to <https://console.cloud.google.com/>
2. Enter your NETID in the e-mail field and click "Next"
 - You should be redirected to a shibboleth login screen
3. Enter your NETID and password and click Login
 - If you have configured 2FA for your university account, then you may be prompted for Duo 2FA

You should then be taken to Google Cloud, where you can "Select a Project" at the top-left
