

kurator-akka v0.1

Product version	kurator-akka v0.1
Release Date	11/09/2014
Description	First release of kurator-akka package with basic capabilities for declaring and running data curation workflows in Java and in YAML.
New features	• Builder classes for configuring and instantiating actors and workflows in Java. • YAML declarations of actors and workflows. • Command-line interface for running YAML-defined workflows and specifying workflow parameters. • Messages for initializing actors and for starting the actors after they are all fully initialized. • Standardized approach for terminating actors and workflows using end-of-stream messages. • Actors and workflow declaration of the hamming dataflow program. • Actors for reading and writing CSV-formatted files of specimen records. • Adaptations of the FP-Akka ScientificNameValidator and InternalDateValidator actors. • Sample workflows using the ScientificNameValidator and InternalDateValidator actors.
Source code	• kurator-akka (tag v0.1)
Dependencies	• FP-Core [r4098] • FP-CurationServices [r4098]
Downloads	• kurator-akka-0.1-executable.jar
