

# PEcAn

Coming releases of [PEcAn](#) will come with the ability to utilize Brown Dog for data conversions to model specific formats (part of our Ecology use case with [Mike Dietze](#) at Boston University). In developments to come this will aid PEcAn in the usage of large data sets such as [NARR](#). Below you can see an example of Brown Dog being used to process the data needed for the [SIPNET](#) model:

and for the [ED](#) model:

Special thanks to [Betsy Cowdery](#) (Ph.D. student in Earth Sciences), [Edgar Black](#) (Research Programmer), and [Rob Kooper](#) (Senior Research Programmer) for adding the needed conversions to Brown Dog and interfacing to PEcAn.
