

Evaluating TA-SPARQL

```
import edu.uiuc.ncsa.datastream.util.Query;

//...

Context context = ... // create a tupelo context
Query query = Query.parse("SELECT ?x WHERE {    ?x . } ORDER BY ?x");
Table results = (Table) query.eval(context);
for(Tuple tuple : results)
    processResult(tuple); //do something with the result
```
