

Configuring the Server

Configuration Tab

In the configuration tab under administration, you should see sections labeled: Mail, Map, and Server Updates. These are explained in more detail in the next few sections.

Mail

- SMTP Server - Mail server that will be used to send e-mail to new and current users information about their accounts.
- From address - E-mail address of the administrator that will be communicating information to new and current users.
- From fullname - Name of the person the e-mail is from.
- Subject prefix - E-mail subject.
- Medici server - Hostname of the Medici server.

Map

- Google Map Key - Google map key used to display locations in the Map tab. You can get a google map key [here](#).

The submit button will add the key to the *server.properties* file

Server Updates

- Re-build full-text index - ?
- Update Context - ?
