

SPARQL

SPARQL Tab

The SPARQL tab provides the administrator with some sample queries that can be run. The example queries are:

- collections - Searches for all collections and displays them
- dataset list - Searches for all datasets with a default limit of 15
- derivation - Searches for derived datasets and displays them with a default limit of 20
- prefixes -
- single dataset - Searches for dataset with specified URI
- tag - Searches for all datasets with specified tag

After selecting a query and providing any details it needs, click the Execute button to run the query. The results will be displayed on that page.
