

Story Boards

Signing Up

1. (Done) User/Developer signs up on BrownDog webpage
 - <http://browndog.ncsa.illinois.edu/>
2. (Done) User receives email with more information and link to survey
3. (Automatic email) User fills out survey
4. (Done) User is contacted by Brown Dog developer and account is activated
5. (Not for April 4) Tools catalog support for single sign-in

Creating and Adding a New Tool

1. (Gregory Jansen, Rui Liu) Developer downloads BrownDog development environment in docker container (in dockerhub, link on BD webpage)
 - BD-956** - Consolidate all contributor instructions on one set of pages DONE
 - BD-957** - Create extractor how-to page DONE
 - BD-958** - Create converter how-to page DONE
 - BD-959** - A template project(s) for converters DONE
 - BD-960** - Create standalone extractor template project DONE
 - BD-1009** - Polyglot change from redirecting URL to downloading file from SS and serving it DONE
 - BD-1017** - Fix polyglot test in bamboo DONE
 - BD-1007** - Design document for polyglot refactoring for docker containers DONE
 - BD-1016** - Add docker files, scripts for building and running Polyglot server and SS containers DONE
 - Contains running Clowner instance, Polyglot instance, basic development tools, maybe even an IDE configured and ready to go
 - Contains a bare-bones extractor ready to be modified for a new tool (with comments suggesting where to edit, in various languages e.g. python, C++, Java, ..., and docker sample file)
 - Contains a bare-bones converter ready to be modified for a new tool (with comments suggesting where to edit, in various languages e.g. bash, bat, ahk, python, ..., and docker sample file)
 - (Done) Polyglot changes from redirecting to SS to downloading and serving converted files to users' "/file/" requests, to support 1 Pol + multi SS docker containers on the same VM.
 - (Done) - Rui provided the files/images.) docker-compose.yml file, docker images for Polyglot server + 2 different SS to work together on the same VM.
2. (Gregory Jansen, Smruti Padhy) Developer installs tool, creates BrownDog interface script(s)
 - Adds sample input file(s)
 - Example extractor: imagemagick edge detector
 - Example converter: imagemagick jpg to ico converter
3. (Gregory Jansen, Smruti Padhy) Developer creates dockerfile
 - For extractors this should contain only the tool, its dependencies, and the extractor
 - For converters this should contain the basic Polyglot setup, ideally only the Software Server, the tool, its dependencies, and the converter interface script
 - BD-983** - Polyglot-Software Server communication refactoring DONE
4. (Rui Liu, Inna Zharnitsky) Developer submits tool to Tools Catalog (using BrownDog account)
 - BD-961** - Automated testing based on sample files and their expected output DONE
 - BD-962** - Publish script for Tools Catalog TO DO
 - (Done) BrownDog interface script(s), dockerfile, sample input, sample output
 - TODO: Documentation on how to add tool to Tools Catalog
 - (Done) Through web interface
 - Through script in development environment (probably the ideal way) **BD-962** - Publish script for Tools Catalog TO DO
5. (Inna Zharnitsky, Marcus Slavenas) Admin reviews and tests tool by pressing button which deploys tool in a separate Clowner/Polyglot sandbox, passes in the given input file, and checks the obtained output file against what is provided
 - a. Manual review source code and docker file
 - b. If ok, reviewer submits tool for testing from tool catalog ui **BD-968** - Script that builds dockerimage and runs tests TO DO
 - BD-969** - Add button to TC that runs test script and shows pass/fail in TC TO DO
 - BD-1055** - Create a BrownDog space on DockerHub DONE
 - i. Build docker image using local parameters
 - ii. If user provides sample output run script to test inputs/outputs
 - 1. if not, manual inspections is required
 - iii. Scripts show pass/fail in tool script
 - Admin click accept or reject

6. (Rui Liu, Inna Zharnitsky) Admin deploys tool by selecting instances to deploy interface on
- BD-916 - Tools Catalog/VM elasticity code to disable an extractor once deployed DONE
 - BD-954 - add support in Tool Catalog to send a request to stop a tool DONE
 - BD-733 - Add Tools Catalog admin widgets to deploy tool to instances DONE
 - e.g. dts-dev or dts
 - selects minimum number of instances to provision (e.g. 5 instances)
 - presses button to deploy
 - Elasticity backend: deploy docker images
 - BD-890 - add support in elasticity module to deploy a tool when requested -- using Docker containers DONE, deploy VM images
 - BD-930 - add support in elasticity module to deploy a tool when requested -- using VM images DONE, stop
 - BD-941 - add support in elasticity module to stop a tool when requested -- using Docker containers and VM images DONE
 - Tool Catalog UI: BD-733 (deploy), BD-954 (stop).
 - Task: integration testing after the web UI part is done. BD-975 - Integration testing of elasticity module and TC DONE
7. (Sandeep Puthanveetil Sathesan) Admin receives status page showing number of tools deployed and where, load on each tool, etc...
- No support for this at this time.
 - How to pull this from MongoDB

Using a Tool

- (Luigi Marini) API Gateway with keys and tokens (uses Crowd credentials)
 - (Not for April 4) Forwarding user credentials to Clowder
 - Clients
 - (Marcus Slavenas) Matlab BD-620 - bd.m Matlab Library DONE
 - Working and includes test script: DAP Outputs, DAP Convert, DTS Extract, and Download File
 - Not yet translated from bd.py: index, find, descriptor distance
 - (Smruti Padhy) R – available
 - (Luigi Marini) bash script using curl BD-984 - Bash script BD client library DONE
 - (Luigi Marini) Python – available bd-cli
 - (Smruti Padhy) Windows – Dap is there, for DTS not sure
 - BD-1004 - File Manager Extension - Encrypt the settings file while saving into the disk DONE
 - BD-1005 - Add key/token support to File Manager extension DONE
 - (Smruti Padhy) Bookmarklet -
 - (Smruti Padhy) Chrome Extension
 - Add keys and tokens to all clients
 - BD-986 - Add key/token support to R client DONE
 - BD-987 - Add key/token support to Matlab client DONE
 - BD-988 - Add key/token support to bd-cli client DONE
 - BD-988 - Add key/token support to bd-cli client DONE
 - BD-989 - Add key/token support to Windows client DONE
 - BD-990 - Add key/token support to Chrome extension DONE
 - BD-991 - Add key/token support to bookmarklet DONE
- (Jong Lee, Eugene Roeder) Simple web interface (requires BrownDog account)
 - BD-967 - Create a mockup (wireframe) for demo web application DONE
 - BD-970 - Implement the front-end UI for Brown Dog Demo Web application DONE
 - BD-976 - Define what endpoints to call from bd-fiddle DONE
 - Web form with field box for file URL or upload
 - Tool selection dropdown box (means of selecting a specific tool)
 - Output select dropdown box (means of allowing system to select tool)
 - Clowder will run all relevant extractors (obtained by selecting "json" as the output)
 - Polyglot will use I/O-graph
 - Suggestions pane will update below
 - REST API performing this same operation
 - Python code in Jupyter lab notebook
 - R code
 - Matlab code

- curl commands
- php
