2016-06-07 Beta planning

Continuation of beta release planning discussion (David, Mike, Craig)

Q. Does it make sense to formally release the "Odum" release?

Release: v1.0beta is primarily a service release (as opposed to code release)

- Deploy tools
- NDS Labs
    - Apiserver/CLI
    - Gui
- Code must be tagged, images tagged, documentation, test cases, test execution

To discuss

1. Actors/roles/responsibilities
2. Tool audit
3. Build/run workflow
4. Dev support via Workbench – is it the same thing?
5. Volumes
6. Revisit notion of stacks
7. Deployment – ansible vs sh?
8. CodeMaps
9. UI mockups
10. Bundles
11. Auth
12. Service catalog

What's in beta

- Multonode install = deploy tools
- single-node install = system shell
    - Local/dockermachine/vm
    - Change label – ability for node ot have multiple labels
    - Can we merge this with deploy tools
- Developer support
- User/groups/permissions/auth
- Build/run workflow
